Abstract

Security is a very broad concept. Because its coverage includes political, economic, ecological, military security. This is a very complex process, because it is clear that sustainable development of the society cannot be achieved if any of the concepts related to security are not provided. This article provides definitions of security and related concepts.

Keywords: security, economic security, damage, profit, information, object, economic subjects, state, term, definition, consumer safety of goods, object safety, fire safety.

In the conditions of market relations, each enterprise has its own commercial, production and other secrets[1]. Their preservation is also of great importance for this economic entity as intellectual or intangible property. Modern employees of the enterprise should not disclose these secrets. Disclosure of this secret is mainly done through information. Due to this, ensuring information security has become one of the important measures in the current conditions [2].

In the conditions of market relations, the safety of each object [3]should be ensured. For this, it will be necessary to develop a definition of object security. However, due to the insufficient development of such a definition in the economic literature, we came to it from our own views: **Object security means objects that are protected from various threats and dangers and have a set of measures aimed at creating conditions for conducting their activities in a normal mode.**

In this case, we are talking about the safety of objects engaged in economic and social activities. This requires paying special attention to the security of economic objects. One of them, which is the most important, is the object of production (performance of work, service).

While we are thinking about economic security, it is appropriate to focus on the security of production (work performance, service) facilities, which make up the main part of it. Based on the definitions of the concepts of economic security, we found it necessary to define it as follows.

Production (work, service) object safety means the existence of a set of measures aimed at preventing accidents (accidents) that occur in various productions that do not correspond to the interests of individuals and society.

Circumstances in our society demand that fire safety be added to economic safety. Because hundreds of fire incidents occur due to various carelessness. As a result, material damage in the amount of millions of soums is seen in a number of objects. Because of this, this issue should have its own definition as a

[3] By "object" we mean all economic operators, with and without the status of a legal entity, engaged in economic and social activities in the conditions of market relations.

type of economic security. Based on the requirements set for the above definitions, we found it appropriate to define fire safety as follows: **Fire safety means a set of measures implemented at the standard level of all measures aimed at its prevention.**

If we do not ensure fire safety in economic and social life, it is difficult to say that we have fully ensured the general safety of the enterprise, including its economic safety. Therefore, special attention should be paid to this issue.

In the conditions of market relations, the reputation of the enterprise directly depends on its goods and products. Because the consumer has always needed high-quality and cheap goods, and this situation has not lost its relevance even today. When every business entity does not ensure the safety of its goods, it is impossible to find a buyer for it. This can make it economically vulnerable. It can be seen from this situation that every enterprise should ensure the safety of its goods. A complete theoretical expression of its content requires the development of its definition. We have come to the opinion that it is appropriate to base the following definition on the definition of consumer safety of goods: **Consumer safety of goods means that the safety of the life and property of the person who consumes it is ensured and it is guaranteed that it will not be harmed in any case.**
