ABSTRACT

Today, the interest in using interactive methods and information technologies in the educational process is increasing day by day. One of the reasons for this is that until now, in traditional education, students were taught only to acquire ready-made knowledge, and the use of modern technologies allows them to search for the knowledge they acquire, independent study and thinking, analysis. even teaches them to draw final conclusions themselves. In this process, the teacher creates conditions for the development, formation, learning and upbringing of the individual, and at the same time performs the functions of management and guidance.

Education is a cooperative activity of the teacher and students, and in this process, the development of the individual, his education and upbringing is realized. In the lessons, the teacher conveys his knowledge, skills and abilities to students through exercises, and students acquire the ability to use them as a result of mastering them. In the process of learning, students use different forms of learning, that is, they rely on specific differences in receiving, processing and applying the information being learned. In the course of education, issues of education and upbringing are solved in the form of cooperation between teachers and students during classes, independent work of students, extracurricular activities.

It is known that the implementation of advanced pedagogy and new information technologies in education not only increases the effectiveness of training sessions, but also in the education of an independent and logically thinking, well-rounded and highly moral person by applying the achievements of science in practice. is important. As of today, we all know that the information and communication system is developing at a high level on a global scale, and it is affecting the education process, among other fields, and has an impact on its higher quality organization. In such conditions, it is natural that the theoretical and practical aspects of human activity are continuously updated. We can say that pedagogical activity is a separate and complex type of work. Educators are trying to achieve guaranteed results in their activities.

The fact that the 21st century was recognized by our scientists as the age of information technologies is proof of our opinion that pedagogical and information technologies are developing day by day in all fields, including the introduction of new information technologies in the field of education. As envisaged in the "National Personnel Training Program", provision of new information to the

educational process is developing on the basis of pedagogical and educational technologies, computerization and computer networks.

Education of the perfect generation - in the Law "On Education" and "National Program of Personnel Training", the Republic assigns highly responsible tasks to the educational staff. The process of implementing this task requires a new approach to the education of primary school students, and teachers to be very responsible towards their profession and pupils.

The future of the country depends to a large extent on the broad and knowledgeable school children and modern, potential teachers-coaches.

In the process of educational work, it is important to teach students to think creatively, to change situations, to organize activities based on free competition, and to be able to use pedagogical technologies, information technologies, electronic textbooks, versions and multimedia in practical training.

Human development and well-being, creation of conditions and mechanisms for realization of personal interests, change of old patterns of thinking and social behavior are the main goals of reforms implemented in the republic. The formation of an excellent system of training specialists based on the rich modern culture of the people, achievements in the field of economy, science, technology and technology is an important condition for the development of Uzbekistan.
