Annotation

Current in the day out of every 100,000 people in the world an average of 16-17 people own to his soul intention to do observed and that 's every 40 seconds one of a person life trouble face holding was determined . In the article own _ to his soul intention of doing the most main anxious character this his fast in the photo grow up going light up given _ Adolescence puberty during to suicide inclination level and countries in the section suicide cases illuminated .

On the basis of suicidal behavior typical of adolescence, parents, pedagogues, peers of the teenager blame the wrong pedagogical-psychological influence in the educational process, negative changes in the personality characteristics and emotional states of the teenager. due to insufficient attention by Violation of relations between a teenager and his social environment, difficulties in interpersonal relations, pressure exerted by parents, employees of educational institutions without taking into account the subject's needs and interests, the meaning of life, safety and " loss of the feeling of "necessity" is often one of the reasons for the manifestation of suicidal behavior.

It should be noted that the study of this problem in our country is of great scientific-theoretical and scientific-practical importance. Because only some of the employees responsible for the educational work of teenagers: a) features of puberty period of teenagers; b) cases of mental stress; c) adolescent depression; g) have the necessary information about conflict situations with adults and educational methods and means of their elimination .

Adolescents are also unable to save a friend from suicide in unpleasant situations due to lack of knowledge about their age characteristics, skills to help peers. The analysis of the conducted studies shows that the mechanisms of suicide are insufficiently substantiated from a theoretical and practical point of view, psychological, pedagogical prevention, diagnosis, and correction of suicide of these ages are not widely used in practice, adolescent suicide and its prevention It is emphasized by experts and scientists that there is a lack of information about suicide, and educational measures to limit and prevent suicidal activity among them do not give sufficient results.

According to the results of our research, the criteria for suicidality syndrome in adolescents can be summarized as follows - the presence of suicidal thoughts in the anamnesis; - parts of a dysphoric state (feelings of sadness, frustration, depression); - disorders such as insomnia, fatigue, vegetative changes; - the formation of clear ideas about the methods of committing suicide was determined.

It was observed that the behavior and symptoms of suicidal behavior and somatic changes of those who committed suicide attempts during adolescence were analyzed. In particular, the main motive of suicidal behavior in pre-puberty and minor puberty is conflicting experiences related to mental illness and fear (6.9 percent, 30.7 percent), while puberty and post-puberty age it was found that personal, family, teacher-student conflicts (39.2 percent, 44.9 percent) as well as conflicts related to social moral norms. AGAbrummova says that suicide is a social-psychological inability to adapt to the microsocial conflicts that a person is going through.

Based on the results obtained from studies of suicidal behavior, the following are proposed:

- the concept of suicidal spirit among young people, first of all, thoughts that manifest people's interest in the topic of suicide, their depressive view of life and suicidal behavior and formed as a form of social mood, including structural structures;
- identified the main determinants of suicidal tendencies: psychological and social factors and living conditions of people in society, which include socio-psychological, disadaptation, conflicts, etc.
- socio-psychological assessment of youth suicide and suicide in society, about their attractiveness and place in society;
- social and psychological determinants of different age groups (pupils, students, young professionals), suicides, the presence of suicide experience, its types, and situations that appear, the factors and characteristics of suicide, the impact of suicide, the general depressive mood of the studied youth;
- revealed the relationship between socio-psychological factors (conflicts in the family and small groups, social discomfort in society) and suicide attitudes of young people, the nature of youth concerns, their value systems, ways of spending free time, additions and subcultures;
- a special questionnaire was developed to study and analyze the socio-psychological features of suicidal moods of young people;
- the technology of special socio-psychological study of youth suicide and suicidal behavior was developed and tested;
- own _ to his soul intention did of young people mind and virtual communities in communication and thematic of sites role and importance;
- specialized virtual communication on sites in the process own _ to his soul intention to do trends done increase prevention get developed an original model for released;
- to young people different different tools using own _ to his soul intention of doing prevention get according to practical recommendations given _

Suicidal attempt about wrong _ and real psychological circumstances the following :

1. Suicide about many p being spoken person to himself meat have to pull trying han will be Suicide in khaki often to speak a person in the heart different spiritual sufferings from existence and person them around to the gills to deliver from trying a tree will give
2. Suicide suddenly face gives in 8 out of 10 cases suicide own plan about to those around to deliver from trying a tree will give

3. Suicide hereditary disease Person autoaggressive behavior pattern not only in the family absorbs, perhaps surroundings from the environment template takes
4. Own _ to his soul intention to do spiritual Many diseases suicides in general spiritual to the disease not played healthy are people
5. If the person in the past suicide happen reached if it is , it 's different Most do not repeat cases suicide repeat happen will be done
6. Suicide happen doers to die Most want suicide happen doers to die maybe they don't want to them suffering to be forig they want and help acceptance to come they prepare
7. Leading to suicide coming all behavior im - pulsive (suddenly) happens Most suicide actions in advance thorough thought out will be and him happen doers to those around they feel
8. All suicides depressant in case Depression to suicide take coming possible , but all suicides and depression in the situation they won't be
9. Suicide prevention get possible not Help get opportunity existence understanding mostly suicides prevention to get possibility will give
10. Own to his soul intention those who come very less cases help to get tend to commit suicide took by 50% in cases near persons to doctors, psychologists , parents appeal they come

To observations than , prosperous countries this condition less observed and young people life more poor countries risk under the fact that about to the conclusion leads. Now gender point of view in terms of looking after if we are , own to his soul intention those who did between to women than men more the fact that known will be

"That's the difference behind standing factor in societies " of men male to be need" regarding views ," he said explains Sutherland . But poor al countries male and Women between own to his soul intention to do cases between difference less the fact that observed . Prosperous countries men to women than , three dignity more own to his soul intention if they do , they are poor and average countries this difference only half equal to Concerned land that is , of the world some in the regions own to his soul intention 15-19 years old to do those who are between to death reason divisor main to the factor became. For example , Southeast Asia in countries . I'm from Smyrna at the age of has been and from the world past every six from a girl one own to his soul intention did " Our guess that is , it is in the region own _ to his soul intention to " more efficient " ways of doing things reach easier and help deliver possibilities less ," he says Fleishmann . Specialists as they say , to his soul intention do " at once one day " happened giving won't stay Transferred _ to research according to himself killed 90 percent of teenagers which one level spiritual health to the problem have those who are This is the place from depression to violence and addict to substances from mukka leave to the language is taken . But another from the side to live of the conditions change , school and friends with problems and sexual inclination on the surface Uncertainty is also a factor as manifestation to be observation possible.cTherefore for early alert giver anxious to the characters attention focus need not to forget must will be This week Britain to universities new of students come additions observations Samaritans organization _ young people between own to his soul intention to do of cases prevention get according to is conducting a campaign ." in Oliyogah life in many cheerful , enthusiastic and himself to know towards trip as present will be done . Many for so to be maybe , but some for from home another to the place of moving himself big one to the problem becomes " , he says organization manager director .

But spiritual to problems face every holding own makeup to his soul intention can't do it . From this except , the problem about publicly not to speak and even some countries illegal saying to be seen sure information to the hand input makes it difficult . of the United States Injuries prevention get agency see , insult and own to his soul intention to do between dependence there

is , but this dependence simple and straight away dependence not " Insult encountered o' smir and young people own to his soul intention to do with depends to actions hand hit more about message they give ... But own to his soul intention of doing main factor an insult to say right it's not and even is harmful . Because " insult belongs to answer own to his soul intention to do he said the idea cause take out , on top of it this to imitate such as Dangerous state also release can "

Some to assumptions see, own to his soul intention to do about " universal " reports in the press are also for imitators impulse to give can Specialists call it " social". of the virus spreading " they call

The problem of suicide now concerns not only world psychologists, but also representatives of all fields. If we look at the data of the World Health Organization, we can see that its image is increasing day by day, so it is correct to say that the practical work to fight it is not fully effective. Not only that practical perhaps theoretical sort the data as well get him concrete issues to solve focus we found it necessary.

1. Suicide it 's every a psychologist by a known one level studied _ process and this in learning own to theories to suffocate actions his to solve has been from actions a little far away to leave take came That's why for this data in order exit it is necessary
2. From the influence of religion right directed without suicide the problem prevention get can Religion is anything psychological from the effect according to efficient and wide scale effect do it get feature there is of the United States Stockton university Professor David Lester works to this burn evidence is considered
3. Right now in the day islam the term shahid in religion wrong interpretation to do his suicide with synonym way to use take came, Of this reason of people religious of knowledge enough level that it is not means And of this due to people which one of groups bait being remains.
4. To suicide circle a lot methods there is but religious individuals psychological diagnosis this to really develop needs direction is considered in this field development a person psyche in learning big from the steps one will be.
