Keywords: market economy, the USA, education system, the power, achievements.

ABSTRACT

Socialist triumph over society, capitalist society in 1991, the USSR, his allies and his decompose, social society itself is justified. As a result, based on market relations it their way — capitalist society, gave up. We also offer our state of new countries, consisting of chosen based on a democratic way of market relations. Easy transition to market economy, and now the night continues in this advanced has many years of experience, economic and political achievements in the sphere requires practice makes studied. This in a number of countries their economic power, the social and economic life in the USA that stand out in terms of production potential, the study of government policy and reforms of great scientific and practical importance.

George from 2001 to 2009 in the area of social policy of the Bush administration lasted until. Bush's advisor on economic affairs to the range of the main economic and social policy of Edward Lazarus, the chairman of the Council, Office of Management and Budget Director Robert Portman; let us labor secretary Chao Eliminate the vice-president Che; US financial secretary Henry Polson; U.S. commerce secretary Carlos Gutierrez; US secretary of health and Michael O. Services to the population. From the hub of the national economic council director Allan and Livitt, such as you can add.

In January 2002, Bush Democrat and chief sponsor Senator Ted Kennedy as "the children left behind" the law was signed, and the difference between these achievements kamchliklar to eliminate the readers to measure the activity of work, schools and the parents of poor children in disadvantaged schools to give the opportunity to more federal financing. Critics, including Senator John Kerri and the National Education Association, school resources to respond to the new standards give to say. The White House Education and Workforce Committee in the financial year 2001 NS the general funds of the Ministry of Education had received since increased to 14 billion US dollars in the financial year 2005 that contained 42,6 billion US dollars 56,6 billion US dollars, he said. This document states government norms for exercising enough moliyalashtirilmagan was rejected[1].

The White House Education and Workforce Committee of 8, signed by Bush in January of 2002, "the children left behind law" on the federal government today as a result of primary and secondary schools (K-12) education spending more money than you.

This policy was put in one of the biggest mistakes in our opinion, because of the way the forms of the implementation of the reforms are enough scientists under control after the date of this shakllantirmadi sustainable growth in the education system.

To the study of stem cells

Cell research, adult stem cell research and umbilical cord blood vessels in support of president bush. However, the bush and opposed to any new federal funding stem cell research embrional to limit put her there. If Embrional of stem cells for research mablag'birinchi 1999 federal-19 year-in January, during the period of president clinton approved the money, but the instructions had posted etilmaguncha sarflanmasligi. Guidelines Clinton during the period August 23, 2000, was announced. They use the unused frozen embryos they allow. 2001 August 9-instructions until the instructions are available only in on this mablag'ajratilgunga bush announced that he would be amended to allow the use of stem cells[2].

Already more than 60 embryonic stem cell lines are available mablag'hisobidan private Bush have claimed that in 2003, only 11 of scientists that there is a good line to use and approved for federal funding in 2005 noted that the strips all contaminated and unfit for use[3]. Adult stem cells are not limited funding for further research was supported by the results of president bush as a means of life.

Space studies

Bush on 14 January 2004 guidelines for the implementation of the declaration of her research in space (exhibition space research (vse) v. president george bush this plan was published by the space research. This columbia disaster the space ship, space flight of nasa and the space people respond to the position of the public interest as a method to learn to think to repay found)[4], the international space station until 2010, the graduate construction "Projest Sonstellation" under the name "Crew Exploration Vehisle" (Vehisle Crew Exploration – love the composition of nasa, the u.s. space have access to the research plan. Implied in the plan held a contest to create a space ship that people can take to address. Design Orion spaceship is called the production of the new space ship. Love of the astronauts from the moon until the year 2018 had to be used for the return to america this month to create a permanent base and eventually had planned to send the fly to mars mission. 18 billion NASA budget for this purpose in the plan in 2008, the year 2010 is planned in "spa shuttle highway" from the production of 5 billion us dollars per year and also my park or spend up to 6 billion was wait. 16,2 billion us dollars in 2005 by nasa offered the amount of the budget committee of the chamber of representatives and the senate during the presidential campaign and encounter less resistance to the costs of this initiative is to get the language[5]. Despite this, the budget approved with minor changes from the election in November, many afterward.

“According to the opinion of the thinkers support, this plan is an important part of the work when you set the bush in his position. However, the policy has been criticized in two spheres. First of all, before the united states engaged in space research should concentrate critics came to the idea that to solve internal problems. Secondly, Bush which offer new deductions accounted for only 1 billion dollars in the next five years of funding, and the remaining us \$ 11 billion for the full implementation of this idea is separate from nasa's other programs, and therefore would be sufficient. Term for the new program spending and reduce the budget for the costs of the current program of the president of the republic after president bush a big part of planning from recent years. The point of view of any space with coordination problems in the long term, the budget was not clear.

New space transportation policy information leaflets was out of the white house in January of 2005, the administration's space policy in the broader sense to describe the development of space transportation capabilities and are bound by the requirements of national security[6].

Environment

In December 2003, Bush his "healthy forests initiative" of the implementation of the law's main provisions were signed. Another theme of contradiction - aimed at reducing air pollution through expansion of Bush's trade waste "clean sky initiative" was. In 2002, Bush's "Great lakes me'ros on" the law was signed, the federal government and the ingredients pollution in the great lakes contaminated sediments, as well as the cleaning of abandoned industrial area brown area or sped up (stop the rest of the industry) in the world to protect the people of better health [6], job creation and the restoration of community was trying to make. Kyoto protocol support quvvatlamasligining Bush is the reason some of the developing countries, in particular China and India are intentionally soft in a relationship, in the US includes the unfair targeting. Bush: "who is this state throughout the world second biggest greenhouse gas out of China. Despite this, the Kyoto protocol requirements are completely free from China" -that has expressed dissatisfaction [7].

Bush, as well as the event of doubt standing behind global warming science and research further to determine its authenticity requires to put under.
